Projects

Module 1: Personal Website

Description: *Module 1 focused on learning how to build a website using Flask, a lightweight web framework for Python. Skills practiced included learning how to connect backend logic with frontend design using Python to create the website structure, HTML to control the layout, and CSS to define the visuals. The completed site serves as a professional portfolio and features a homepage with personal information, a contact page, and a dedicated projects page. The projects page will be updated as work is completed throughout the course.*
